How to use the Projector in Crouse-Hinds 425

Computer:

1. Connect the monitor cable to the computer and set the computer to whatever display mode will be used for the presentation. For best results, set the resolution for the projector to 1024 x 768.

2. Turn the projector on by pressing and holding the “ON/STAND BY” button until the status LED goes off and the power LED turns green (about 1 sec).

3. If necessary, use the “FOCUS” and “ZOOM” buttons to adjust the image.

4. To turn the projector off, press and hold the “ON/STAND BY” button until the screen goes blank and the power LED begins to flash yellow. The projector’s fan will speed up to cool the bulb and then shut off automatically after a few minutes.

Troubleshooting:

If everything is connected properly but the display remains blank, press the “SOURCE” button. A list of inputs will appear briefly. Make sure that “RGB2” is checked. If not, press and hold the “SOURCE” button for about 1 second. The projector will switch to the next input source in the list. Repeat as needed to reach “RGB2”.

Videotape or DVD:

1. Not available until installation is finished.

Technical Data:

- Projector model: NEC MT1065
- Native resolution: 1024 x 768
